PARTE I: GUÍA OFICIAL Y SISTEMAS DE JUEGO (WIKI HANDBOOK)

Compilación integral de los 21 manuales técnicos y guías oficiales de *sfe5.wiki* redactados por el autor y la comunidad.

1. Visión General del Juego (Overview)

SFE5 — Game Overview

Neutral, player-facing description of the game. Design critique and known issues live in [design-notes.md](#).

What it is

Special Forces Elite 5 (SFE5) is a custom StarCraft II co-op survival / defense map, developed by **Drusus**.

- **Classic mode:** 6 players, cooperative.
- **Two primary objectives:**
- **Defend the Planetary Fortress** — the primary structure. If it falls, the game is lost.
- **Kill all enemies.**

Match setup

Three choices frame a match:

1. **Game mode** — chosen first. **Classic** is the default (difficulty selection + hero selection + story mode + bonus events). Other modes (Torment, Hardcore, Nightmare, Split Income, 10 Player, Debug) change the rules — see [game-modes.md](#).
2. **Difficulty** — in Classic the tiers are **Casual, Normal, Hard, Brutal, Torment, Impossible** [tool]. **Torment is normally locked** until you have enough Brutal wins; a veteran with a reset bank can enter it early from the lobby instead. **Nightmare** is a separate infinite-wave mode, not a tier. See [game-modes.md](#).
3. **Starting hero** — hero selection (shown after difficulty resolves). **42 heroes** across Terran/Protoss/Zerg, or **Random**. Starting minerals = 12,000 / Players (Random adds 15,000 / Players). Details: [heroes-and-units.md](#).

Power scaling — the core economy

After setup, at any point during the match, players spend **minerals** on power. There are four levers:

1. **Upgrades at the Planetary Fortress.**
2. **Purchasing buyable heroes.**
3. **Purchasing regular units.**

4. Buffs + attributes/stats at the player console.

All four are forms of power scaling. Two properties define the meta:

- **Late game is buffs & stats.** Most power scaling late in a match comes from buffs and attributes/stats rather than from raw unit count.
- **Concentration beats breadth.** Players are incentivized to pick a handful of units and commit all their minerals into them, rather than spreading across many.

The beginner buy order is in **getting-started.md**; the buff/stat system (opened with **Alt+C**) in **buffs-and-stats.md**.

Progression

The match advances through **spawners**, which escalate the enemy composition over time. It ****starts** with the Infested**, climbs the Zerg tech tiers, and passes through three Protoss phases:

- **Protoss Phase 1** — the first **Maar** encounter, after the Rupturer / Super Spawning Pool.
- **Protoss Phase 2** — the **Xel'Naga Crystals** stage; clearing it **enables the pinnacle bosses**.
- **Protoss Phase 3** — the optional **Narud** fight.

The full ordered objective list is in **objectives.md** (also rendered on the ****Income** tab). Pressure systems** — drop pods, nydus worms, and timed waves — run on top of spawners: **attack-waves.md**.

Enemy strength ramps within a match: a steady time-based upgrade cycle (enemies get stronger the longer a game runs, and faster at higher difficulty) plus progression events. Each ****class** of enemies gets random buffs (shown as colored enemies) only when its own spawner is destroyed** — e.g. the Infested class when the Planetary Fortress falls, the Zergling class when the Super Spawning Pool falls. See **enemies.md**.

[tool] Exact cadence (+1 to every enemy category every $150 \div \text{difficulty-denominator}$ s) and the

per-difficulty denominators live in [reference_sfe5_difficulty_scaling] / **difficulty.ts** — keep hard

numbers out of the player overview.

Pinnacle bosses

- **Enabled** by clearing the **Xel'Naga Crystals** stage (**Protoss Phase 2**); each has a ****unique** summon method**.
- Killing a pinnacle boss awards **100,000 minerals** (+300 rank points) — a major economy swing.

Summon methods + rewards: **bosses.md**.

Economy & rewards

- **Minerals** — the single currency funding all power scaling; earned on enemy kills

(difficulty-scaled). See **economy.md**.

- **Bonus objectives, secrets, and random events** reward minerals, rank progress, and unlocks:

objectives.md.

- **Rank & points** (cosmetic) and **achievements** (which unlock cosmetic rewards):

ranks-and-points.md, **achievements-and-rewards.md**.

Variation & replayability

Two design principles shape how a game varies:

- **Every game starts equal**. All players start with the same things, and ****no power carries between games — there is no meta-progression. This is a deliberate, load-bearing philosophy. (The banks** persist stats/rankings, not in-match power — see **banks.md**.)**

- **Variation comes from within a match**, not from persistent unlocks. The levers:
- **Procedural map generation** — enemy units and structures are placed at startup, and the ****two**

trios of spawners (**Hydralisk/Roach/Mutalisk and Ultralisk/Impaler/Greater Spire**) are shuffled**

between games: **map-generation.md**.

- **Random events** and **secrets**: **objectives.md**.
- **Special events** and **Mutation Mode** custom rulesets: **game-modes.md**.

2. Guía para Principiantes (Getting Started)

SFE5 — Getting Started

Player-facing. Source: designer's Discord (captured 2026-08-06); may be outdated. The detailed systems this references live in **buffs-and-stats.md**, **enemies.md**, and **player-console.md**.

Kill all enemies while defending the **Planetary Fortress**. Use your starting hero, buyable heroes, elite units, or armies to do it. Max out **upgrades** first, then buy **buffs**, and finally **stats** — all from the **Player Console (Alt+C)**.

What to do

- **Spend all available minerals on upgrades**, and **advance on the enemy at the same time** to earn more minerals and power up faster.
- **Be careful popping some structures** — they can contain deadly units.
- **Read tooltips**. They're often overlooked and save the whole team headaches.
- Learn the loop first: push into enemy territory → upgrade & buff → then attempt more advanced strategies and base defense.

Tooltip text colors

Ability tooltips are color-coded — the color tells you what a value does:

Color	Meaning
Yellow	Damage abilities
Orange	Debuff abilities
Pink	Healing / buffing abilities
Teal	Ability duration and radius
Green	Speed bonuses / attack-speed modifiers
Tan	The value is fixed

Powering up (beginner path)

1. **Pick a hero** you like, or go Random.
2. **Spend all minerals on upgrades**, in this order:

1. **Unique / unit upgrades first** (if your unit has one) — they're ****cheap** and sometimes very necessary. **Found in the matching base subsection.** Example:**** Son of Korhal → click the base → Terran Infantry [Z] → Infantry Upgrades [Z] → research Custom Rifle and **Combat Shield**.**
2. The **500 primary race upgrades**: damage, armor, life, energy, attack speed. Set these to **autocast** so that if you die with your hero you take only a **minimal** mineral penalty.
3. **Then buy buffs** — all **7 tiers plus Ace and Demiurge** (Player Console, Alt+C).
4. **Finally buy stats** — strength, dexterity, intelligence, stamina.

Buy **all upgrades before buffs**, and **all buffs before stats**. Beginners should finish upgrades first until they know the more advanced (and riskier) strategies — see **strategies.md**.

- **Use one unit/hero at a time** until you're comfortable — spreading across multiple units usually wastes minerals. Concentrating your minerals into a few units is the intended way to play.

What to purchase (build orders)

Every build follows the same shape — **upgrades** → **buffs** → **stats**:

Build	Order
Starting hero	Unit upgrade (if any) → the 500 primary race upgrades → buffs (7 tiers + Ace + Demiurge) → stats .
Buyable hero	Same as a starting hero.
Elite unit	Buy Veterancy ASAP → unit upgrade → 500 primary upgrades → buffs → stats .
Secret unit	Same build as an elite unit.

- **Elite Unit**: giving **any non-heroic unit Veterancy** (e.g. a Marine) turns it into an ****Elite Unit**. **It then gains** stacks of Elite Unit****** and grows substantially stronger as it racks up kills. See **heroes-and-units.md**.

- **Secret units**: special units ****unlocked** by defeating the corresponding pinnacle bosses on Torment difficulty. **They use the** same build order as an elite unit******. See **heroes-and-units.md**.

Energy note: some units have **no energy or energy-scaled abilities**, so you don't need to buy energy to see their full power.

3. Estrategias y Tácticas de Equipo (Strategies)

SFE5 — Strategies

Player-facing. Source: designer's Discord (captured 2026-08-06); may be outdated. Beginner build guidance is in [getting-started.md](#).

Some strategies involve **glass-cannon builds** and **unit combos**.

Vision

Vision is very important and can spare you from death.

- Buy a **Blimp, Observer, or Overseer** (depending on your race).
- Get **Ace** on it to unlock **invulnerability**, and buy **Optical Lens** (a Tier 1 buff) to maximize

vision.

- Have this unit **follow you everywhere**.

Transport

For quick movement around the map, buy a **Medivac, Warp Prism, or Overlord**.

- When **Aced**, it unlocks **invulnerability** — a worry-free way to cross the map.
- Each race's **workers** can also build a **recall structure** for fast repositioning across the map:

the **Einstein-Rosen Bridge** (a unit), the **Recall Station**, and the **Remote Nydus Network** — one per race.

Glass cannon

If you can dodge enemies well, or your unit favors it (e.g. **Nova**), you may ****skip** some primary upgrades — **for example buy only** damage **and** life****** (the two that most directly boost your overall damage) — to maximize the **stats** you can afford by the end. Highly unit-dependent and **very risky**.

Early buffs

You may buy buffs early on your unit (e.g. **Mental Power** for **Karass**). This is ****high risk / reward**** — you must not die and lose your buffs. (All buffs are lost on death; see [buffs-and-stats.md](#).)

Unit combos

Playing multiple units can enhance your power — often through race-specific auras and debuffs. Examples:

- **Ghost** (Terran) — **EMP** greatly **increases the damage the target takes**.
- **Arbiter** (Protoss) — **increases the attack damage and speed** of your units.
- **Guardian** (Zerg) — **boosts the armor of nearby allies**, and its ****attacks** make enemies take more

damage**.

[tool] The EMP damage-taken amplification is modeled in the DPS engine ([amp.ts](#) , [DamageResponse](#)

ModifyFraction / DamageDealtScaled path) and was validated during the DPS audit.

4. Modos de Juego y Niveles de Dificultad (Game Modes)

SFE5 — Game Modes

_Sources: designer's Discord + Codex [WIKI_GAME_SYSTEMS_DRAFT.md](#) (frozen), captured 2026-08-06. May need corrections / be outdated — treat as a first pass._

The mode is chosen first and frames the whole match.

Source reconciliation: the two sources list modes differently. The **Discord** list is

Classic / Torment / Hardcore / Nightmare / Split Income / 10 Player / Debug. The **Codex** systems doc

covers Classic (+ Difficulty), **Mutation Mode**, Hardcore, Nightmare, and **Calendar events** — and

treats **Torment as a difficulty**, not a mode. Both are captured below; (**confirm** the canonical

mode list, and whether Split Income / 10 Player / Debug are full modes or lobby variants.)

Classic

The default game mode and the standard SFE5 flow: **difficulty selection**, **hero selection**, ****story mode**, **and** bonus events^{**}. Players defend the base, progress through the main objective chain, and deal with bonus events, timed waves, drop pods, nydus worms, and generated map threats. Most wiki pages assume Classic unless another mode is named.

Difficulty

Difficulty changes ****enemy strength**, income, revive timing, revive penalties, enemy upgrades, nydus timing, movement speed, damage reduction, boss durability^{**}, and other global settings. Higher difficulty → stronger enemies, more punishing deaths, longer/costlier revives, **better point rewards** but **harsher point losses**, and more dangerous event timing. The game also ****rescales enemy durability** to the number of active players^{**}, recalculating when players leave so the remaining team isn't treated like a full one.

The six tiers are **Casual**, **Normal**, **Hard**, **Brutal**, **Torment**, **Impossible**.

Torment

Torment is the **top difficulty**, reachable two ways that are **the same Torment**:

- **In-game (team vote)**: normally **locked** until you have enough **Brutal wins**. Winning Torment

once **unlocks the Brutal–Torment range** for all your future Classic games.

- **Lobby (direct entry)**: a veteran with a **reset bank** can select Torment in the lobby (mode selection) **before** the game starts — **no win requirement** there.

Difficulty is **fixed** (you don't vote for it in-game), and the death penalty for losing a starting hero is **100% of minerals**.

[tool] Consistent with the **Torment** difficulty tier's `percentageLoss = 1.0` . Also the difficulty

at which **secret units unlock permanently** (see **heroes-and-units.md**).

Mutation Mode

The **lobby host configures a customized rule set** before the game starts. The chosen settings can alter ****difficulty, enemy generation, event availability, economy, buffs, bonus heroes, starting resources, attack-wave behavior, and other rules. The game then runs a classic-style startup**** with those custom rules.

Hardcore

A throwback to the original Special Forces — a stricter branch that **forces a high-difficulty rule set** and disables normal conveniences:

- Starting heroes are replaced with **12 elite units** (4 per race).
- Enemies **do not upgrade**.
- **Buffs cannot be purchased**.
- **No Protoss enemies spawn** — staying true to the original barebones game.
- **No game events or bonus objectives**.
- Lets you **buy units and upgrades from any race**, but **disables secret units**.

Nightmare

A separate **infinite-wave** survival mode (not the normal Classic progression). The ****spawn area moves to the center of the map**** (instead of the usual bottom-left), a Nightmare wave UI is created, and the game runs numbered waves.

- First **100 waves are completely unique**, then the pattern repeats. Every **10th wave is a boss**.
- Uses a separate **Level X** display (Nightmare experience) instead of classic rank text.

- The repeating 10-wave pattern:

#	Wave
1	Ground
2	Ground
3	Air
4	Cloaked Ground
5	Elite
6	Ground
7	Ground
8	Cloaked Air
9	Ground
10	Boss

Full mechanics (wave types, the radiation boundary, and scaling) are in **nightmare.md**.

[tool] Matches `difficulty.ts` Nightmare handling (scales itself, skips the regular `DifficultyManager`).

Split Income

(Discord.) Identical to Classic, but **income is not distributed evenly** — the **killing player** receives the income (see **economy.md**).

10 Player

(Discord.) Identical to Classic, but the team size is **10 instead of 6**.

Debug

(Discord.) All debug commands accessible, with an **easy-access command console** to run commands and spawn units. The Debug Console opens via **Ctrl+Alt+C** (Debug Mode only).

Special Events

Some rules change during **calendar-based special events** — **December, Christmas, New Year, April Fools, and Anniversary. **These can alter visuals, gifts, fireworks, the** buff economy, bonus heroes**, and other event settings.

These are one of the map's deliberate **variation levers**, alongside procedural generation and

random events.

5. Consola del Jugador [Alt+C], Comandos e Interfaz (Player Console)

SFE5 — Player Console, Commands & Interface

_Sources: Codex [WIKI_GAME_SYSTEMS_DRAFT.md](#) (frozen) + designer's Discord, captured 2026-08-06. The buff-purchase side of the console is detailed in **buffs-and-stats.md**; reward unlocks in **achievements-and-rewards.md**._

Player Console

The **main player-facing control panel** — settings, rewards, cosmetics, buff controls, leaderboard/profile options, income-display controls, and utility commands. Opened from the **Gamebar / Player Console UI**; the shortcut is **Alt+C** (saved setting: **Auto-Open Alt+C**).

Settings

The **Settings** tab (**Ctrl+Q**) holds display toggles and preferences. **Most are saved to the bank** and restored in later games (see **banks.md**).

Setting	Effect
Base Selection	Whether selecting the base redirects you to the upgrade menu , or lets you select the Planetary Fortress itself — so you can apply buffs and stats directly to the fortress.
Income Numbers	Show/hide income when killing enemies.
Income Multipliers	Show/hide the multipliers used to calculate income.
Income Colors	Show/hide the colored income based on the enemy type killed.
Income Focus	Show/hide the income of less important enemies.
Apply Rewards	Whether valid created units are automatically given your last-used rewards.
Dialog Hotkeys	Show/hide the hotkeys on the difficulty and hero selection screens.
Boss Life	Show/hide the label that shows boss life on the boss bars.
Auto-Open Alt+C	Automatically open the Alt+C console after selecting a hero.
Hide Portraits	Show/hide all cinematic portraits.
No Shaking	Whether the camera shakes when a boss is summoned.
Unit Stats	Show/hide a menu that displays in-depth unit info.
Debug Info	Show/hide a menu that shows some internal info about the game.
Debug Log	Show/hide a menu that shows internal game operations.

Secret Heroes

The Settings tab also has a **Secret Heroes** section — one checkbox per bonus hero that opts it in or out of your selection pool:

- Alex Jones
- Donald Trump
- Dr. Evil
- Doom Slayer
- Barack Obama
- Joe Biden

In-game tooltip:

Include/exclude this Secret Hero from being in the selection pool if a Secret Hero is rolled. You can only exclude the hero from the pool once you've rolled it at least once.

All start unchecked. See **heroes-and-units.md** for how bonus heroes are rolled.

Cosmetic rewards

Select unlocked visual rewards for your units and leaderboard identity — effects, halos, minimap icons, pets, scale, badge icons, symbols, nickname options, name styling. With **auto-apply rewards** enabled, saved cosmetics are reapplied to newly created, revived, or behavior-changed units. Reward availability is gated by **requirement checks** — normally **achievement points**, though ****donators** get the full set of rewards**.

Gamebar

A series of buttons **beside the minerals (top-right of the screen)** that open various menus. Each button has a **hotkey** for easy access. The Player Console is opened from here.

Leaderboard

Shows basic player statistics and your rank. Clicking a player on the leaderboard opens a ****profile** overview. **From there you can** give that player points **based on their game performance** — **Friendly****, **Leader**, **Trolling**, or **Retard** — or open their **full profile**.

Commands

Text commands

Command	Effect
<code>-[color]</code>	Change your player color to the requested color phrase.
<code>-double rainbow all the way!</code>	Enable cycling (rainbow) player colors; awards the Rainbow achievement.
<code>-m</code>	Send minerals to the owner of your selected unit.
<code>-trading help</code>	Show trading help.
<code>-mode</code>	Show mode help.
<code>-difficulty</code>	Show difficulty help.
<code>-ss on</code> / <code>-ss off</code>	Hide / restore major UI surfaces for screenshot mode.
<code>-reset bank</code>	Reset saved bank progress — destructive .

You rarely need these. Color picking, trading, and most other options live in the ****Player**

Console → Settings **tab**. Mode **and** difficulty **are both shown on the** 6th Gamebar button** —

the **battlecruiser icon beside your minerals** — though many new players still type `-mode` /

`-difficulty` out of habit.

Hotkeys

Hotkey	Effect
Alt+Z	Open the game menu.
Alt+X	Open your profile.
Alt+C	Open the Player Console (auto-open per saved setting).
Alt+V	Open the changelogs.
Alt+B	Open the kick menu.
Ctrl+Alt+Q	Kill selected units (your own non-hidden units that aren't protected Planetary Fortress dummies).
Ctrl+Alt+C	Open the Debug Console — Debug Mode only (see game-modes.md).

Tip: Hold **Shift** while purchasing any stat to spend **all** your available minerals on it at

once, instead of stopping at the normal per-purchase cap.

Achievements entry point

Achievements are found within the **player profile**; sufficient achievement points unlock rewards accessed through the Player Console. Full details: **[achievements-and-rewards.md](#)**.

6. Mecánicas de Buffs, Atributos y Ultimates (Buffs & Stats)

SFE5 — Buffs & Stats

_The core late-game power system. Sources: designer's Discord + the (now frozen) Codex

`WIKI_GAME_SYSTEMS_DRAFT.md`, captured 2026-08-06. Costs/tiers are "current defaults" and may change._

What buffs are

Buffs are powerups for units, applied through the **Player Console (Alt+C)**. With enough minerals, the console can **apply or sell buffs for all selected units at once** (each unit is still validated independently).

Buy order for beginners: all upgrades first → buffs → stats. See **getting-started.md**.

Tiers

There are **7 tiers** of buffs, plus **ultimate buffs**. **Only one buff of each tier (1–7) can be on a unit at a time**, so pick the ones that complement your hero/unit/playstyle. Each tier offers four options — broadly one per role (offense variants + defense).

**The full catalog — every buff with its icon, in-game effect, and cost — is on the

Buff List page.**

Conditional buffs

Several buffs only pay out while you hold a particular state. The state is always one **you** choose and can keep — never one the enemy puts you in — so these are playstyle picks, not luck.

- **Momentum** (tier 3) — while you are **moving**. A stack lands every half-second up to **5**, each worth **+5% damage of every type** (+25% at full stacks). Stacks last 3 seconds, so they ramp up as you kite and fade shortly after you stop.
- **Bulwark's Braced stance** (tier 6) — while you are **standing still**. The same half-second ramp to **5** stacks, each **+1% damage of every type** (+5% at full stacks). They expire a second after you move, so the bonus belongs to units that plant and fire.
- **Static Charge** (tier 4) — while you are **being hit**. Every hit you take adds a charge — at most

one every half-second, and only from hits above a small chip threshold — up to **10**. Each charge is **+1% weapon damage** and **+2 life and shield regeneration**, and lasts 8 seconds.

- **Quantum Field's Overcharge** (tier 4) — when your energy is **full**. Your unit latches ****+75% spell damage for 4 seconds**** with energy regeneration switched off, then cannot latch again for 4 seconds (or until energy falls below 100, whichever comes first) — and needs a full pool again to fire. One surge per recharge cycle: parking at full energy earns nothing extra.

- **Predator** (tier 3) — after **5 seconds without taking damage**, its bonus against Heroic enemies rises from +100% to **+150%**. A standoff buff: get clipped and you drop back to the base bonus.

- **Optical Lens** (tier 1) — keeps you **cloaked while you have not taken damage for 2 seconds**.
- **Enhanced Regeneration** (tier 4) — its healing **surges after 10 seconds out of combat**.

Because two of these are opposites — Momentum wants you moving, Braced wants you planted — a build can only ever cash one of them at a time.

Ultimate

- **Ace** — very powerful. **Purchased**, or **earned by killing strong enemies** (Queens, Brutalisks, Bosses). On vision/transport units, Ace also **unlocks invulnerability** (see [strategies.md](#)).

- **Demiurge** — a **cheat-death** buff with a **180-second cooldown**.
- **Veterancy** — unlocks experience levels for units that don't have them by default. Applied to a

non-heroic unit, it becomes an Elite Unit (see [heroes-and-units.md](#)).

- **Maximum Experience** — sets a unit straight to the **level cap (100)**. Costs 75,000, with **750 minerals refunded per level the unit already has** — effectively 750 per missing level. See leveling in [heroes-and-units.md](#).

Stats (attributes)

The four attributes are **Strength, Dexterity, Intelligence, Stamina**. Buy them **after** buffs.

Neutron Armor is not an attribute — even though it sits near the attribute controls, the attribute rules don't apply to it.

Costs

All costs are listed per item on the **Buff List** page. Prices can be lowered or raised

by **mutator settings** (a "cost factor") or by special-event rules.

Refunds & death

- **Tier 1–7 buffs and Demiurge** can be **sold for a full refund**.
- **All buffs are lost on death**, but are **refunded at partial value depending on difficulty** — you

get most of your minerals back at lower difficulties, down to **nothing on Torment / Impossible**.

[tool] The per-difficulty refund fraction is `percentageLoss` in `difficulty.ts` /

[reference_sfe5_difficulty_scaling] (Normal 25% loss ... Torment/Impossible 100%). The refund/value

logic is shared with the death, salvage, and revive systems — not only a Player Console concern.

7. Catálogo Completo de Buffs de la Consola (Buff List)

SFE5 — Buff List

Every buff and stat purchasable from the Player Console, with its in-game effect resolved live from the game data — the same numbers the in-game tooltips show. Costs are current defaults, before modifiers. For how the buff system works (buy order, refunds, death rules), see **[buffs-and-stats.md](#)**.

8. Héroes, Unidades de Élite y Veteranía (Heroes & Units)

SFE5 — Heroes & Units

_Sources: Codex [WIKI_GAME_SYSTEMS_DRAFT.md](#) (frozen) + designer's Discord + a mid-turn note, captured 2026-08-06. Build orders for each are in [getting-started.md](#)._

Hero selection

- **Appears after you pick difficulty.** Choose a specific hero or **Random**; if you don't pick before the selection timer ends, the game **assigns a random hero**.

- **42 heroes** across Terran, Protoss, and Zerg. The tool lets you view each hero's abilities and passives and what they do, like in-game.

- **Starting minerals** = 12,000 / Players. Choosing **Random** grants an extra 15,000 / Players.

Mutators can change both before the game starts. (See [economy.md](#).)

Bonus (secret) heroes

A pool of **six** joke/secret heroes:

- Alex Jones
- Donald Trump
- Dr. Evil
- Doom Slayer
- Barack Obama
- Joe Biden

- **Bonus Hero Chance = (6 – chosen difficulty) out of 100** — chosen difficulty is 0 at Casual, 1 at

Normal, and so on (so **6% at Casual**, lower at higher tiers).

- Require **bonus heroes to be enabled** (enabled by difficulty, and **disabled on Torment and Impossible) and $\geq 3,000$ achievement points**.

- **Selecting or rolling a bonus hero disables achievements for all players** that game, and lets you **buy units and upgrades from any race**.

- **You can opt out of specific bonus heroes.** After you roll one, the **Player Console** → **Settings** lets you disable it; future rolls then only draw from the pool of bonus heroes you've **opted into**.

(**confirm — flagged in source**): the Codex atlas flags a possible bug in the random bonus-hero roll

(it rolls a separate value, but the check appears to use the normal hero index). Intended behavior is

a *low* chance to get a secret hero on Random; the exact live probability should be verified before

publishing a number.

Elite Units

Giving **any non-heroic unit Veterancy** (e.g. a Marine) unlocks the **Elite Unit** buff. From then on the unit **gains stacks of Elite Unit** and becomes substantially stronger as it **racks up kills**.

Max upgrades, then buffs + stats — same as a hero.

[tool] Elite Unit = the **EliteUnitBuff** → **EliteUnitMax** stack modeled in the DPS engine (per-stack

up to a max of **+125 flat damage, ×1.6667 attack speed**), validated across the DPS audit.

Secret Units

There are **secret units** that are **more powerful than normal units**. They can be given **Veterancy** to become **Elite Units** (above).

- **Permanently unlocked** by defeating their corresponding **pinnacle bosses on Torment difficulty**.
- On **lower difficulties**, the unlock applies **for that game only**.

Reinforces that **Torment is a difficulty** (not only a mode) — the permanent-unlock tier. Ties into

pinnacle bosses in **bosses.md**. (**confirm** which secret unit maps to which boss.)

Veterancy

Veterancy is a prerequisite for many unit upgrade paths and cosmetics, and unlocks experience levels on units that don't have them by default. Applied to a non-heroic unit, it makes an **Elite Unit** (above).

Buff inheritance

Some **created units inherit** part of their source unit's power — its ****buffs, attributes, Elite Unit, Neutron Armor, and some others**. **Spawned or summoned units therefore** preserve part of the creator's power state**.

[tool] This is the player-facing side of the DPS engine's **summon inheritance** rules — summoned

children inherit buffs but at **half potency** (`isSummonedChild`), elite parents' summons get

EliteSummon, and **magazine ammo** (Carrier interceptors, etc.) fights at the owner's config.

Leveling

- **Experience gain:** killing enemies grants experience, and a small share is passed to nearby allies.
- **Leveling up** also **deals damage in a small area** and can **restore some of the unit's vitals**.

The max level is **100**.

- **Maximum Experience** levels the unit up in exchange for minerals — **250 minerals per level**.

[tool] XP per kill = **20% of the enemy's base health** (no buffs/upgrades), capped at **5,000**;

10% of that is shared to allies within **radius 20**. These constants will need re-checking when

enemies are rescaled — dev reference, not player-facing.

Ownership & selection

- **Rewards** (cosmetics) can only be applied to units **you own**; **buffs** can be applied to ****any**

non-enemy unit. **Both work on** multiple selected units** at once.

- **Units of players who left stay on the map** and can still fight and die, but ****can't** summon bosses

or trigger other world/map interactions**.

9. Economía, Minerales y Resurrección (Economy)

SFE5 — Economy & Revival

Source: Codex `WIKI_GAME_SYSTEMS_DRAFT.md` (frozen), captured 2026-08-06. Values are "current defaults"; difficulty and Mutation settings change many of them.

Income

Income is awarded when **hostile units die**. The system calculates the mineral payout, applies **difficulty and internal multipliers** and **special-unit multipliers**, then optionally shows floating income text.

- **Payout and display are separate** — turning income text off hides the floating text **without** preventing rewards. Display options — showing multipliers, showing colors, or **focusing** the display on more important kills — are all set in the **Player Console settings menu**.
- **Split income** changes who receives income: normally income is **shared** — each eligible Special Forces player gets their **own** payout/display per their settings; in **split**, only the ****killing player**** receives the income.
- **Exact payout:** income is computed per kill from the enemy's stats, difficulty, and player count.

Rather than print a formula that goes stale, the tool's **Income tab** shows the current, up-to-date computation for every enemy — treat it as the source of truth.

[tool] The difficulty income multiplier is `difficulty.ts` `incomeFraction` (Casual **1.15**, Normal

1.0, Hard 0.8, Brutal 0.7, Torment 0.6, Impossible **0.3**) — matches `income.ts`

`DIFFICULTY_INCOME_MULT` .

Trading

The recommended way to give minerals is the built-in **trade UI** in the **Player Console** → **Settings**: select a unit belonging to the player you want to give to, then set the amount. There is also a `-m` chat command that sends minerals to the owner of your selected unit, but the trade UI is preferred over spamming the command. Both work the same way (pick the recipient's unit, choose an amount) and both count toward **trading achievement** tracking.

Starting minerals

In Classic hero-selection games:

- **Starting minerals** = 12,000 / Players.
- Choosing **Random** grants an additional 15,000 / Players.
- **Mutation** settings can change both before the game starts.

Supply

Supply caps how much you can field at once:

- A **solo** player has **80 supply**.
- Each **additional player** reduces it by **10**, down to a **minimum of 30**.
- Supply is **recalculated when a player leaves**.
- A **secret event** can reward **+10 supply**.

Revive

When a hero dies it revives after a delay and loses a fraction of its minerals. Both scale with

difficulty, and revive time also grows slightly with the unit's level:

Difficulty	Revive time	Per level	Minerals lost on death
Casual	15 s	+0.3 s	0%
Normal	20 s	+0.4 s	25%
Hard	30 s	+0.6 s	50%
Brutal	40 s	+0.9 s	75%
Torment	40 s	+0.9 s	100%
Impossible	40 s	+0.9 s	100%

Mutation settings can change these further.

Leaving the game

When a player leaves, the game **deducts points for quitting, redistributes their minerals** to the remaining players, and **recalculates enemy scaling, supply, and income** for the new player count.

- **Leaving does not despawn that player's units** — they can remain on the map and still matter to some systems, while others intentionally exclude units owned by inactive players.

10. Guardado de Datos y Bancos SC2 (Banks)

SFE5 — Banks & Save Data

Source: designer's Discord (captured 2026-08-06). May need corrections / be outdated.

Banks

The game uses **two banks**:

Bank	Contents	Protection
OrdoAbChao.bank	Main stats.	Encrypted , with tamper checks.
Settings.bank	Settings — e.g. camera zoom, leaderboard characters.	Not encrypted; editable outside the game if you want to change settings.

Restoring lost data

If your bank was reset or lost, you can retrieve the data from a replay:

Bank location

Documents → StarCraft II → [Account Name] → Banks → 1-S2-1-2744634

The digit appended to your account name (the @# suffix) indicates region: **1 = Americas, 2 = Europe**.

(confirm — design reconciliation): design-notes.md records a load-bearing "no power carries between games" philosophy, yet OrdoAbChao.bank persists "main stats" and there's a rankings system. Presumably the bank holds lifetime stats / rankings / unlocked leaderboard characters — **not** in-match power — so the no-carryover rule still holds. Worth confirming exactly what "main stats" covers.

11. Rangos de Honor, XP y Puntos (Ranks & Points)

SFE5 — Ranks & Points

_Source: Codex [WIKI_GAME_SYSTEMS_DRAFT.md](#) (frozen), captured 2026-08-06. Some figures are noted in the source as "current trigger evidence" — treat as current defaults._

Ranking system

Classic rank is based on **saved classic points**. Rank letters, low → high:

R · D · C · B · A · S

- Players **start at D - 1** with **0 classic points**.
- **Negative** classic points display as **R - N**, where N grows as the player goes further below 0.
- The active rank function uses **10 sublevels** per main positive band before the next letter

(positive progression: **D-1 → D → C → B → A → S**). This **supersedes** the older "5 levels per rank" wording.

- **Ranks are intentionally cosmetic** — they grant ****no** gameplay power, unit unlocks, or direct rewards******.

- **Nightmare** does not use classic rank text; it shows a separate **Level X** from Nightmare experience.

Level costs (non-linear)

Each rank level costs more points than the previous. The ****first visible level-up** requires 10,000 points, **and each later level requires** 250 more****** than the previous — an exponential-feeling curve from a steadily increasing per-level cost.

Level	Points
D - 1	0
D - 2	10,000
D - 3	20,250
D - 4	30,750
...	...
C - 1	111,250

For the exact point requirement of any level, use the **Rank Calculator**.

[tool] This is exactly what the **Rank Calculator** page computes — cross-check the calculator against

these anchors.

Points

Classic points are earned from **game progress, bonus objectives, bosses, achievements, wins**, and other progression events, and lost by **losing, quitting, or being kicked**.

Base values

Event	Points
Bonus objective (easy)	25
Bonus objective (medium)	75
Bonus objective (hard)	150
Bonus boss killed	300
Progression boss — early game	100
Progression boss — mid game	150
Progression boss — late game	200
Win the game	200
Defeat	−6,000
Quit / leave the game	−8,000
Kicked from the game	−20,000

Final adjustments

Base values are **not** the final saved amount. Finals are adjusted by:

- **Difficulty** — higher difficulties **increase gains** but make **losses and quit penalties more

severe**.

- **Player count** — more players make the game easier, so **points are split thinner**: solo players

earn the most, and smaller teams earn more per player.

- **MVP-style contributions** — kill / boss / structure share.
- **Player-specific handicap or bonus** settings — e.g. low **R-rank** players are given **bonus points

as a catch-up aid** when they win a game.

Special cases:

- **Leaving** after the early grace period can **halve** earned points, then apply the quit penalty

before final calculation.

- **Defeat halves** active players' earned points before defeat scoring. On **Impossible**, defeat-loss

handling is **capped differently** in the final calculation.

[tool] These base values + adjustments are the model behind the **Points Calculator** page.

Rewards

Ranks provide **no direct reward**. **Achievement points** (not rank) unlock visual rewards in the Player Console — effects, halos, minimap icons, leaderboard icons, and related profile/leaderboard visuals. See **achievements-and-rewards.md**.

12. Campaña de Objetivos y Reductos (Objectives)

SFE5 — Objectives

_Source: Codex [WIKI_GAME_SYSTEMS_DRAFT.md](#) (frozen), captured 2026-08-06. The optional pinnacle fights have their own page: [bosses.md](#)_

Every objective location — spawners, bosses, and event sites — can be viewed on the

Interactive Map.

Main objective chain

Main objectives simply **tell you what to do next**. The Classic game runs through alternating Zerg and Protoss stages — roughly **Zerg → Protoss → Zerg → Protoss → Zerg**, then **optionally Protoss again**.

The **Queen of Blades is the final boss**; everything after her is **optional**.

Current chain (key stages note what they unlock):

1. Destroy the Infested Barracks
2. **Destroy the Infested Fortress** → starts **cardboard boxes** (Mystery Boxes) generating around the map
3. Kill Frankenstein
4. Destroy the Spawning Pools
5. Kill the Rupturer
6. **Destroy the Protoss base** → enables the **Pedestal** (extra income) and the **Artifact** to collect (Artifact Hunt). Note: this is **not** Protoss Phase 2.
7. Destroy the Hydralisk Den
8. Kill the Dread Hunter
9. Destroy the Roach Den
10. Kill the Roach Queen
11. Destroy the Spire
12. Kill the Overmaster
13. **Destroy the Xel'Naga Crystals** → this is **Protoss Phase 2**; finishing the stage **enables all the pinnacle bosses**
14. Destroy the Impaler Den
15. Kill the Defiler
16. Destroy the Ultralisk Den
17. Kill the Stank

18. Destroy the Greater Spire
19. Kill the Leviathan
20. Destroy the Hive
21. Kill the Queen of Blades
22. Kill all remaining Zerg

Once the **three spawners before the Hive** — the **Impaler Den**, **Ultralisk Den**, and **Greater Spire** — are destroyed, and **while the Hive is spawning**, the **Hollows** event can be started (see **bosses.md**).

Late-game progression can continue into the **Narud chain**: Ancient Remnants, Xel'Naga constructs, Void structures, and Narud.

[tool] This chain is the spawn order in [src/income/chain.ts](#) / the Income tab. **Protoss Phase 2 is

the Xel'Naga Crystals stage (step 13, [XelNagaCrystal2](#))** — that's what enables the pinnacle bosses,

NOT step 6 (the Protoss base, which enables the Pedestal + Artifact).

Bonus objectives

Optional events that add **variability between games** — rescues, rare enemies, hidden objects, puzzles, pickups, and special map interactions. They can award **minerals**, **rank progress**, **achievements**, **unlocks**, and other match-long benefits. Some run on a **timer** and **fail if it expires** (marked *(timed)* below).

Random events — appear by chance each game:

- **Greedy Grabber** — a small goblin that rewards minerals when killed.
- **Civilian Rescue** *(timed)* — save a civilian colony.
- **Pygalisk Infestation** *(timed)* — clear the pygalisk cocoons.
- **Quillgor** — a rare summon that gives minerals when killed.
- **Pinked** — a random map enemy carrying a powerful **pink** buff — but it can be **mind-controlled**.
- **Rare Bosses** — one of **3 possible bosses** that can spawn near the Hive; give minerals.
- **Infested Wraith** *(timed)* — a patrol unit; gives minerals when killed.
- **Infested Tank** *(timed)* — a patrol unit; gives minerals when killed.
- **Stormblade** *(timed)* — a patrol unit; gives minerals when killed.
- **Watchlord** *(timed)* — a patrol unit; gives minerals when killed.
- **Kaiser** *(timed)* — a patrol unit; gives minerals when killed.

Triggered events — started by finding or interacting with something:

- **Pedestals** — a puzzle that permanently raises your **minerals per kill** by a set amount.
- **Emulator** — a tower that starts **votes**: summon a timed event, or stop/start drop pods, nydus worms, or all passive spawns.
- **Artifact Hunt** — collect the artifact for minerals.

- **Mystery Boxes** — click one **10 times fast** to open it for a **random reward** (often a buff for all allies, sometimes minerals).
- *Tip:* boxes are easy to miss. If you think a box is somewhere but can't find it — or just want to

check a spot — **drag a selection box over the area while no units are standing in it**. If a box

is there, it gets selected (it's a selectable unit), and you can start clicking it.

- **M-O (Microbe-Obliterator)** — a secret mini-boss; killing it **temporarily unlocks M-O** and gives minerals (**permanent unlock on Torment**).
- **Turkey Apocalypse / Moopy Apocalypse** — find these units and kill their trigger units to start **10 waves**; finishing rewards minerals.
- **Lucky Lizard** — one of **8 lizards**; killing it permanently boosts the **minerals from heroic-enemy kills**.
- **Research Bay** (*timed*) — a two-stage event with **Dr. Ivanov**; completing stage 2 raises the **spawn level to 10** (buffing all enemy spawns and increasing income from heroic enemies).
- **General Clinton** — put **20 units** in the antenna region marked "**20**" to trigger her. She spawns on a platform closer to the Hive and lasts **2 minutes**; killing her **drops a nuke on the killing unit** — including your base if it lands the kill.

Boss events — optional bosses, listed by their in-game names. See **bosses.md** for how to summon each and their rewards.

- Odin, the Titan of Armageddon
- Gorgon, the Skycleaver
- Eclipse, the Destroyer of Worlds
- Chaindog, the Mauler
- Diablo, Lord of Terror
- Thaal, the Severed Link
- Assembler, the Foundry's Warden
- Hybrid Behemoth
- Hybrid Experimented
- Hell's Gate
- Celestial Kerrigan
- Altar of Echoes
- Hollows

Other

- **Unstable Minerals** — not really an objective; a map-generation quirk that players can destroy for

extra minerals (clearing every one can award challenge progress).

Objective secrets

Some secrets are **started by player interaction** and grant a one-time reward:

- **Classified Enhancements** — grants **Ace** and **+250 experience per enemy kill**.
- **Outhouse** — gives **+10 supply to all players**.
- **Gravestone** — grants **extra Elite Unit progress from hybrid kills**.

Other interaction points are the **summon triggers for the optional bosses** — see

13. Oleadas de Ataque, Cápsulas y Nydus (Attack Waves)

SFE5 — Attack Waves

The Classic-mode pressure systems. Sources: Codex [WIKI_GAME_SYSTEMS_DRAFT.md](#) (frozen) + designer's Discord, captured 2026-08-06. All timings are "current defaults" and can be changed by mutators/settings. Three systems apply pressure on top of spawner enemies: **Drop Pods**, **Nydus Worms**, and **Timed Attacks**.

Drop Pods

- Default delay **45 game seconds**, but the loop **waits 120 seconds** before the first persistent drop-pod cycle begins.
- Targets a valid active Special Forces unit **outside the base** (alive, vulnerable, active-player owned, weapon-capable). It lands **near a random valid unit**, or a **random point outside the base** if none qualify — i.e. **summoned directly onto your units** when possible.
- **Contents scale with spawn progress**: early infested → later Zerg, hybrid, and high-tier enemies.
- Can be disabled by a **mutator** or an **Emulator vote**.

Nydus Worms

- Appear from **12 fixed spawn locations** (marked by **craters**).
- Default delay **180 game seconds ÷ the difficulty's enemy-upgrade factor**. Mutators can change delay, max duration, max active worm count, and worms per cycle.
- Worm type depends on **spawn level**:

Spawn level	Worm
3	Minor Nydus Worm
4	Nydus Worm
5	Major Nydus Worm
6	Super Nydus Worm
7	Mega Nydus Worm
10	Ultra Nydus Worm

- Each worm stays active for a while — its **duration varies by difficulty** — then unburrows and

despawns.

- Nydus worms begin **after Protoss Phase 1**, not from the start of the game. They can be disabled by a **mutator**, an **Emulator vote**, or **Impossible-mode rules**.

[tool] The $\div$ denominator is `difficulty.ts` `upgradeDenominator` . Worm active duration =

`nydusWormDuration` per difficulty (Casual 75 / Normal 90 / Hard 120 / Brutal-Impossible 150 s).

Timed Attacks

Classic attack waves sent from the **Hive area** toward the base.

- Default interval **300 game seconds** (every 5 minutes). The attack-wave timer starts at **one** interval, the boss-wave timer at **two**; waves run through **cases 0–13**, alternating normal pressure and boss-style waves.

- Boss wave cases:**

Wave	Boss
1	Infested General
3	Rageling
5	Hellbringer
7	Brood Emperor
9	Hybrid Viper
11	Hybrid Lenkus
13	Ferocious Brutes

[tool] **Exact match** for the **"Timed Bosses"** category on the Income tab (added earlier) —

Infested General, Rageling, Hellbringer, Brood Emperor, Hybrid Viper, Lenkus, Ferocious Brutes.

- Normal wave units (and non-boss units within boss waves) are **stronger** than the equivalent spawned enemies.
- Odd-numbered boss waves award classic progress points**, later waves using higher progress tiers (see **ranks-and-points.md**).
- After **wave 13**, boss-summon time is **reduced by $\div 3$** . The Emulator can force the next timed wave by pushing the countdown to 3 seconds.

14. Jefes Territoriales y Pinnacle Bosses (Bosses)

SFE5 — Bosses

_Source: Codex [WIKI_GAME_SYSTEMS_DRAFT.md](#) (frozen), captured 2026-08-06. Rewards are "current defaults." The interaction points that start these summons are in **objectives.md**.

Pinnacle bosses

Pinnacle bosses are **optional fights**, designed to be much harder than normal objectives. Each has a **unique summon method and fight structure**.

- The pinnacle bosses become available after clearing the **Xel'Naga Crystals** stage (**Protoss Phase 2**) — see **objectives.md**.

- Most pinnacle bosses reward **100,000 minerals** and **300 rank points** on defeat.
- **Narud, Servant of Amon** is the progression-linked endgame boss — killing it **ends the game**, so it gives rank progress but **no mineral reward** (there's nothing left to spend it on).

- Many summons work by **holding a unit at a specific spot** for a set time — a shared ****boss-summon timer, 90 seconds**** by default. The long timer prevents accidental triggers; once the team clears **timed-wave 13**, they're deemed ready and the timer is **cut to a third**.

[tool] The **100,000-mineral** Boss reward is a major economy injection — directly relevant to the **boss-summon slog** in **design-notes.md**: summoning and killing every boss is both the monotony problem *and* a huge mineral incentive, which is why players feel compelled to do it.

Summoning methods

Boss	How to summon
Odin, the Titan of Armageddon	Move heroic units of the matching races across the beacon path (roughly the NW→SE diagonal); when all three beacons are activated , Odin is summoned.
Gorgon, the Skycleaver	Build 4 structures within the bounds of the SR-04 Antenna area.
Narud, Servant of Amon	After Protoss Phase 2 , destroy all 4 Ancient Remnants (each is invulnerable until you click it 5 times quickly) to advance the late Narud chain.
Diablo, Lord of Terror	Hold the Gas Station area (the "Fueling Up" event) through the channel and the following spawn-wave sequence until Diablo appears.

Boss	How to summon
Chaindog, the Mauler	Place a unit within the chairs in front of the Mengsk Statue , hold the summon area, then destroy the statue.
Hybrid Behemoth	Hold near the Xel'Naga Crystal , then destroy 1 of the 2 Void Crystals that spawn (the "Artifact Summon" event).
Hybrid Experimented	Hold near the Xel'Naga Crystal , then destroy the other Void Crystal path.
Eclipse, the Destroyer of Worlds	Place a unit on the small vent near the Mothership debris until the summon completes.
Hell's Gate	Move 6 heroic units into the small area near the Voice of the Abyss .
Thaal, the Severed Link	Hold units near a small platform until it summons.
Assembler, the Foundry's Warden	Hold units near a small vent until it summons.
Altar of Echoes	A small map object — stand a unit beside it to summon a boss rush .
Hollows	After the 3 spawners before the Hive (Impaler Den, Ultralisk Den, Greater Spire) are destroyed, start it while the Hive is spawning .
Slayn Elemental → Celestial Kerrigan	Activate the Slayn Elemental so that when the Queen of Blades dies she revives as Celestial Kerrigan — a tougher endgame fight.

5-click rule: some interaction objects are **invulnerable until you click them 5 times quickly** to make them vulnerable — the **Ancient Remnants**, and the **Moopy, Lucky Lizard**, ****Little Cleaning Bot**, **and Infested Turkey**** triggers.

Secret unit unlocks

Defeating a pinnacle boss's **corresponding fight on Torment difficulty permanently unlocks** the matching **secret unit** (on lower difficulties, for that game only). See **heroes-and-units.md**. (**confirm** the boss→secret-unit mapping.)

15. Generación de Mapa y Terreno (Map Generation)

SFE5 — Map Generation

_Source: Codex [WIKI_GAME_SYSTEMS_DRAFT.md](#) (frozen), captured 2026-08-06._

Classic games **generate much of the enemy presence at startup** — initial enemy units, structures, miscellaneous spawns, minerals, and gifts, before players encounter them. ****This is one of the main reasons each match can feel different**** even when the major objective sequence is familiar.

[tool] This is the primary answer to the "**variation is hard**" design goal in

design-notes.md: procedural generation (below) + %-chance bonus events + calendar

events are the within-match variation levers, under the no-carryover philosophy.

Generated enemy units

Initial unit generation is divided into **region families**: infested, zergling, pygalisk, hydralisk, roach, spire, intermediate, ultralisk, brood, lurker, and hive areas. Each family has a ****weighted unit pool, and the unit count is scaled by the enemy unit density**** setting.

- **Some families can be shuffled**, changing which enemies occupy an area from game to game:
- **hydralisk / roach / mutalisk** area generation can be reassigned among each other
- **ultralisk / lurker / brood** area generation can be reassigned among each other

Generated structures

The map is split into a **14 × 14 grid of regions** used to pre-place enemy structures: temporary placeholders are created, then replaced with **weighted structure selections**. Count scales with the **enemy structure density** setting.

Structure families:

- **Infested** — Infested Bunkers, Infested Missile Turrets
- **Tier 1 Zerg defenses** — Spine Crawlers, Spore Crawlers, Creep Tumors
- **Tier 2 Zerg defenses** — Super Spine Crawlers, Super Spore Crawlers, Impaler Colonies, Creep Tumors

Runtime spawn activation

Spawners are placed at startup but stay **dormant and invulnerable** until the spawners before them are destroyed — then they begin producing enemies (on a **20-second spawn cycle**). See

enemies.md for details.

- **Forced Spawning** is a separate **mutator-controlled accelerator** that activates spawn-family batches over time — treat it as a **mode rule**, not normal progression.

Region reveals

Some generated or hidden units are ****revealed only when allied units enter specific progression regions****. These one-shot reveals are part of the exploration/progression flow — a gameplay mechanic, not just technical hiding logic.

16. Modo Supervivencia Infinita: Pesadilla (Nightmare Waves)

SFE5 — Nightmare Waves

Source: Codex `WIKI_GAME_SYSTEMS_DRAFT.md` (frozen), captured 2026-08-06. Nightmare's place in the mode list and its repeating 10-wave pattern are in `game-modes.md`; this page is the detailed mechanics.

Flow

Nightmare **replaces the normal Classic progression** with a numbered wave-survival mode. On start the **spawn area moves to the center of the map** (instead of the usual bottom-left), Nightmare-specific spawn points are set up, a **Nightmare wave UI** is created, wave entries **Wave 1–Wave 100** are defined, and a repeating cycle runs.

- The **first wave starts after an initial 60 game-second wait**.
- Each cycle: spawn the next wave → wait the **spawn duration** → optionally ****wait for remaining enemies**

to die → award Nightmare experience** → advance.

- **After wave 100**, Nightmare continues by **reusing late-wave definitions** rather than stopping.
- Progression is shown as a separate **Level X** display (Nightmare experience), **not** the Classic

rank text.

```
[tool] Matches difficulty.ts — Nightmare scales itself and skips the regular DifficultyManager block.
```

Wave types

Waves carry type labels that tell players how to respond:

- Ground · Air · Cloaked Ground · Cloaked Air · Elite · Boss

The wave system computes each wave's ****bounty**, life, damage, regeneration, armor, movement speed, and experience** from the wave definition, difficulty settings, income factor, and spawn count.

Remaining enemies

Nightmare tracks **remaining enemies** for the current wave — hostile deaths decrement the count, and the wave UI shows **current wave number, type, total count, and remaining count**. When **wait-for-wave** is

enabled, the game waits for remaining enemies before advancing, so **cleanup and tracking matter**.

Radiation boundary

The **radiation boundary** punishes **your own units for leaving the play area** — walk a unit out of bounds and it takes **substantial radiation damage that will quickly kill it**, so keep your units inside the zone.

17. Recompensas Cosméticas y Bordes (Achievements & Rewards)

SFE5 — Achievements & Rewards

Source: Codex `WIKI_GAME_SYSTEMS_DRAFT.md` (frozen), captured 2026-08-06.

Achievement points

Achievements are **separate from rank**. Rank is driven by **classic points / Nightmare experience**;

achievement points are used mainly to **unlock visual rewards** and profile/leaderboard cosmetics.

The categories are:

- **Game wins** — simple win achievements.
- **Progression** — simple progress: upgrades, purchasing units, and the like.
- **Enemy kills** — killing normal enemies, structures, Infestors, and Queens, up to high counts.
- **Elite kills** — boss and elite-enemy kills.
- **Timed** — win, or kill a boss, within a time limit.
- **Units** — specialized achievements for doing unique things with various units.
- **Challenges** — tough conditions, usually Brutal difficulty and up.
- **Ultimate** — like Challenges, but the most elite.

Each category also has a **capstone achievement for completing every achievement in it**.

When an achievement is awarded, the game marks it completed, adds its point value, increases the earned count, updates profile achievement icons, checks meta-achievements, and contributes to

leaderboard/profile border progression.

Visual rewards

Achievement points unlock **Player Console rewards** over time — ****cosmetic / interface-facing, not gameplay power****. Categories:

- Unit visual effects
- Halo colors and rainbow halo
- Minimap icons
- Pets
- Leaderboard icons
- Leaderboard symbols
- Name styling options
- Profile and leaderboard border progress

Donators get the full set of cosmetics, but the normal progression path is **achievement points**.

(Reward selection happens in **player-console.md**.)

Profile & leaderboard display

- Profile achievement icons show which achievements are **locked or unlocked**.
- **Achievement points and earned counts** appear in profile/stat displays.
- **Achievement progress changes your leaderboard icon border.** The border tier is set by your

achievement completion — your share of the **maximum available achievement points**:

Achievement completion	Border
100% (max)	Rainbow
≥ 85%	Grandmaster
≥ 75%	Master
≥ 60%	Diamond
≥ 50%	Platinum
≥ 35%	Gold
≥ 25%	Silver
≥ 15%	Bronze
below 15%	None

- Player-selected **badge icons and leaderboard symbols** appear on leaderboard rows.

18. Catálogo Completo de Logros Oficiales (373 Logros)

SFE5 — Achievements

_Generated by tools/achievements/build_achievements.py — do not edit by hand; rerun the script after map changes._

All **373 achievements** in their in-game order, worth a total of **8,040 achievement points**. Achievement points unlock cosmetic rewards in the Player Console.

Game Wins

33 achievements · 390 points

	Achievement	Description	Points

	No Help Needed	Win a Brutal difficulty game with 6 players without leaving, building a structure, training a unit and without losing a unit and/or starting hero. This does not include summoned units.	80
	Tag Team: No Help Needed	Complete the No Help Needed achievement conditions in a 2 player team.	80
	Third Base	Have the Demiurge trigger on the Planetary Fortress 3 times in a single game on Brutal or higher difficulty.	40
	Why So Brutal?	Kill a Brutalisk within 8 seconds of spawning.	40
	Highway To Hell	Defeat Hell's Gate within 20 seconds of spawning on Brutal or higher difficulty.	40
	Rapid Disassembly	Defeat Assembler, the Foundry's Warden within 20 seconds of spawning on Brutal or higher difficulty.	40
	Clean Cut	Defeat Thaal, the Severed Link within 20 seconds of spawning on Brutal or higher difficulty.	40
	Rods From God	Defeat Gorgon, the Skycleaver within 20 seconds of spawning on Brutal or higher difficulty.	40
	Dethroned	Defeat Odin, the Titan of Armageddon within 20 seconds of spawning on Brutal or higher difficulty.	40
	Sped to Hell	Defeat Diablo, Lord of Terror within 20 seconds of spawning on Brutal or higher difficulty.	40
	The Bigger They Are...	Defeat Hybrid Behemoth within 20 seconds of spawning on Brutal or higher difficulty.	40
	...The Harder They Fall	Defeat Hybrid Experimented within 20 seconds of spawning on Brutal or higher difficulty.	40
	Time Destroyer	Defeat Eclipse, the Destroyer of Worlds within 20 seconds of spawning on Brutal or higher difficulty.	40
	God Slayer	Defeat Celestial Kerrigan within 20 seconds of spawning on Brutal or higher difficulty.	40
	Brute And Braun	Kill the Ferocious Brutes within 30 minutes on Brutal or higher difficulty.	40
	Thrashed	Kill all Void Thrashers within 60 seconds of each other on Brutal or higher difficulty.	40
	Speed Construct	Defeat the Constructs within 30 seconds of each other on Brutal or higher difficulty.	40
	No, Narud	Defeat Narud, Servant of Amon within 20 seconds of becoming vulnerable on Brutal or higher difficulty.	40
	Narud-Miss	Defeat the Void Thrashers when the timer is less than 20 seconds.	40

	Achievement	Description	Points
	Construct Cannibal	Have Constructs kill 100 other enemy units on Brutal or higher difficulty.	40
	Construct Warriors	Have a Construct kill another Construct on Brutal or higher difficulty.	40
	Conquer The Universe	Defeat Narud, Hell's Gate, Odin, and Diablo on Torment difficulty.	80
	Play-Testing	Play a game with the developer, Drusus.	100
	Veteran	Obtain the following 15 achievements: - The Rematerializer - Base Of Blades - Nearly Divine - Glass Cannon - Ultimate Defender - Art of War - I Am Become Death - Ultimate Veteran - No Help Needed - Why So Brutal - Master Of Puppets - Boss Slayer - Just Too Easy - Am I A Joke To You?! - Boss Master	100
	Mastery: Ultimate	Unlock all Ultimate achievements.	40

19. Notas de Diseño y Filosofía de SFE5 (Design Notes)

SFE5 — Design Notes (moved)

_Reference-only, not player-facing. **This content has moved to the design charter:**

../DESIGN-PHILOSOPHY.md_

The designer intent, known problems, and open goals that used to live here — no meta-progression, within-match variation, the boss-summon slog, completionist pressure, and the concentrated-build optimization — are now folded into and maintained in **DESIGN-PHILOSOPHY.md** (§1 pillars, §6 known problems, §7 open questions). This stub remains only so existing wiki citations resolve; see the charter for the current, authoritative version.

20. Manifiesto del Compendio y Estructura (Wiki Readme)

SFE5 Wiki

A living reference for **Special Forces Elite 5** — what the game is, how it plays, and how it's designed. Two audiences, one source of truth:

- **Players** — how the game works and how to play it well.
- **The tool / AI reference** — the ground-truth model of the game the balance + DPS work binds to.

Every other doc in [docs/](#) describes the *engine* (DPS, upgrades, difficulty math). This wiki describes the *game* — its rules, structure, economy, and design intent.

Contents

Start here

Doc	What it covers
overview.md	The game at a glance — mode, objective, setup, power scaling, progression, economy, variation.
getting-started.md	Beginner how-to-play: what to do, powering up, and build orders.
strategies.md	Vision, transport, glass-cannon, early buffs, unit combos.

Modes & difficulty

Doc	What it covers
game-modes.md	Classic, Difficulty, Torment, Mutation, Hardcore, Nightmare, Split Income, 10 Player, Debug, Calendar events.

Player systems

Doc	What it covers
buffs-and-stats.md	The buff/stat power core — 7 tiers + ultimate buffs, attributes, costs, refunds, engine ties.
heroes-and-units.md	Hero selection, bonus/secret heroes, elite units, secret units, veterancy/ace/elite, buff inheritance, leveling.
player-console.md	The Player Console (Alt+C), Gamebar, leaderboard, text/hotkey commands, Debug Console.

Progression & profile

Doc	What it covers
ranks-and-points.md	The R→S rank ladder and classic-points system (the Rank/Points calculators).
achievements-and-rewards.md	Achievement points and the cosmetic rewards they unlock.

Doc	What it covers
banks.md	Save data — the two banks, restoring lost data, bank file location.

Economy

Doc	What it covers
economy.md	Income, trading, starting minerals, revive, and leaving-the-game handling.

The world (PvE)

Doc	What it covers
enemies.md	Spawners, spawn-behavior unlocks, scaling, colored enemies, attack orders.
attack-waves.md	Drop pods, nydus worms, timed attacks, extra Brutalisk waves.
objectives.md	Main objective chain, bonus objectives, timed objectives, secrets.
bosses.md	Secret bosses, summon methods, rewards, secret-unit unlocks.
map-generation.md	Procedural generation of units, structures, minerals, gifts.
nightmare.md	Nightmare wave mechanics — flow, wave types, tracking, radiation boundary.

Reference

Doc	What it covers
design-notes.md	Designer intent, known problems, open goals. Reference-only — not player-facing.

Conventions

- **(confirm)** — captured but not yet verified; may be my inference, a coarse paraphrase, or a point

the source itself flagged for verification.

- **[tool]** — cross-referenced from the tool's own data/code (e.g. [chain.ts](#) , [difficulty.ts](#) ,

[enemy-upgrades.ts](#)) or the DPS-audit findings. Authoritative for numbers.

- Player-facing wording stays neutral; design critique, known issues, and intent live only in

design-notes.md.

Sources

- **Designer's Discord** — player-guide material (getting-started, strategies, buffs, modes, banks).

Flagged by the designer as possibly outdated / needing corrections.

- **Codex** [WIKI_GAME_SYSTEMS_DRAFT.md](#) (Dropbox [AI Knowledge Base/](#)) — a detailed systems reference

compiled from trigger evidence. **Now a frozen snapshot** (the designer confirmed Codex is done), so this wiki is maintained independently rather than mirroring it.

Related engine docs

- **../BALANCE-SWEEP-PLAN.md** — the map-wide balance pass the design notes feed.
- [reference_sfe5_difficulty_scaling](#) / [reference_sfe5_enemy_upgrade_atlas](#) (memory) — difficulty +

enemy-upgrade math referenced throughout.

- **../ENGINE-MODEL.md, ../ARCHITECTURE.md** — the DPS engine.

PARTE II: BASE DE DATOS EXHAUSTIVA DE UNIDADES Y HÉROES (190 REGISTROS)

PARTE IV: MOTOR ECONÓMICO, FÓRMULAS Y CALCULADORAS TÁCTICAS

Modelos matemáticos oficiales que rigen los minerales, daño, rangos de honor, puntos y puzles en SFE5.

1. Algoritmo de Ingreso de Minerales (Income Engine)

Fórmula Central: $\text{Kill Payout} = \text{Base} * \text{DifficultyMultiplier} * (\text{rate} * (12 - \text{players}))$

Multiplicadores de Ingreso por Dificultad

Dificultad	Multiplicador de Minerales	Penalización de Muerte
Casual	1.15x (+15%)	0%
Normal	1.00x (Base)	10%
Hard	0.80x (-20%)	25%
Brutal	0.70x (-30%)	50%
Pro	0.60x (-40%)	75%
Torment	0.30x (-70%)	100% (Pérdida total)
Impossible	0.20x (-80%)	100%

Modificadores Especiales de Economía

- Pedestal Event Bonus:** +35 minerales adicionales por cada enemigo eliminado al resolver los pedestales.
- Lucky Lizard:**
- Dr. Ivanov Mutator:**
- Split Income Mode:**

2. Fórmulas Matemáticas de Daño (Damage Calculator)

Daño a Distancia (Ranged Damage)

Multiplicadores aplicables:

Daño Cuerpo a Cuerpo (Melee Damage)

Multiplicadores aplicables:

Daño Mágico / Habilidades (Spell Damage)

Multiplicadores aplicables:

3. Sistema de Rangos y Curva de Experiencia (Rank Calculator)

Rango	Puntos Requeridos	Niveles
-------	-------------------	---------

4. Solucionador del Evento de los 8 Pedestales (Pedestal Solver)

8 pedestals arranged on the map. Activating pedestals in correct order unlocks the pedestal event (+35 minerals per kill across team).

Recompensa Permanente:

Pedestal	Color / Ubicación	Efecto
----------	-------------------	--------
